

Signs To Replace Traditional Phone System with Virtual Phone System

Here are some signs that your phone system is broken and how a virtual phone system can put your business communication back on track.

1.

Missing Calls

As a traditional phone system works on a copper line and when all the lines are busy, the caller will get a busy signal or constant ringing. Also, you don't get the list of missed calls.

Virtual phone systems comes with many calls handling features like call queue, missed call SMS, call forwarding, call history etc.

2.

Dropped Calls

Dropped calls end up leaving a wrong impression and losing potential clients.

With a virtual phone system, that never happens and you can also make/recvie unlimited calls.

3.

No Remote Work

Staying connected through an outdated business phone system is challenging.

Virtual phone systems let your business run 24/7, from anywhere anytime.

4.

Bad Weather Gives You Creeps

Traditional phone systems rely on copper wires, antennas, and other electrical equipment. Heavy rainstorms can directly damage them.

Since the VoIP doesn't rely on physical equipment, the weather has zero chance of damaging your phone system.

5.

Can't Upgrade Phone System In Snap

Traditional phone system turns into a major problem when you need to add more phones lines. Adding a single phone line can be costly.

Virtual phone system just requires a few software updates and extra bandwidth to scale up in minimal time.
