

SIP TRUNKING

VS PRI

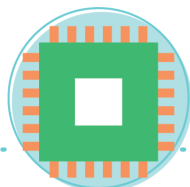

Compare two ways of handling calls

SIP TRUNKING

Unlimited local and long-distance calls included as part of the plan purchased

Requires no new hardware to expand your business. All you need is an internet connection to make multiple calls with multiple channels

Your information is secured in the data center with a fail-proof rate of 99.99999%

Allows you to use and customize features supported by your PBX at no additional cost, saving you even more money

Route calls to any numbers at no additional cost

PRI

Pay additional per-minute fees for long distance calling

Physical phone line with capacity of max 23 calls at a time. New and costly PRI-circuit is required for multi-site offices and to increase capacity of existing phone system

If it fails, you potentially not only lose the hardware but all the important data too- leading to a costly repair

You pay for additional features and services

Re-route calls to a pre-determined alternate location at additional service charges
