

IS YOUR PHONE SYSTEM HACKED?

HOW TO KNOW

Redirecting to Malicious Sites

If you are redirected to other sites during searches, then it's a potential sign that someone is trying to enter your VoIP phone system. Tell your VoIP service provider stronger security system around VoIP via integrate VLAN Segmentation

Install Extensions Automatically

If you have the extension that you never install in your system, then make sure hackers have not gained access to your system. To prevent this, you need to log out of the admin portal when the device is not in use.

Unusual Activities in Call History

Analyse the call history is to pinpoint any unusual activities or irregularities in calls, inform your VoIP service provider immediately to prevent paying bills for calls made by someone else.

Unusual Pop-Up Messages

Notice sudden pop-ups alerting them to fake antivirus installations, system scans, or system being infected, then it's probably malware. Then call your VoIP phone system provider to shut down network and scan your system to detect malware.

Sudden Spike in Monthly Bill

Hacking maybe the reason of monthly bill spike. If you receive higher monthly bills than average, inform your service provider about the issue to stop hackers from using your phone system.
