

# PRACTICE MANAGEMENT

## SOFTWARE INTEGRATION

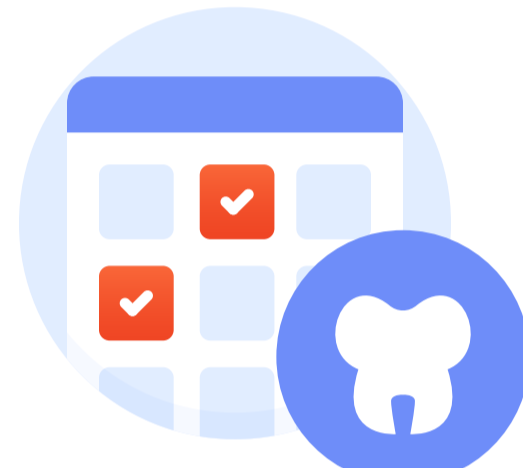

### Smarter Call Pop Up

Our dental app will automatically pull information from your practice management software when a patient call's your clinic. Always know who you are talking to, their last appointment details, family history, balance and much more.

### Appointment Scheduling

Make scheduling that next appointment easy. For example, if your patient has two dental checkups every year, you can set a reminder to be sent to the patient to schedule an appointment twice per year.

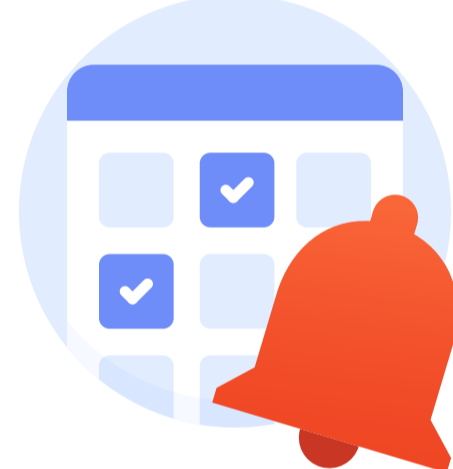

### Managing Call History

Scroll through the calls and see the times, dates, and durations for each call. Take advantage of call filtering to find specific calls from patients, or to pick out those pesky missed calls.

### Appointment Reminder

Automatically sends out SMS messages to the patient's phone asking them to confirm by simply replying yes/no. See the status of appointments and whether they've been confirmed with a single glance at your dashboard.

### Birthday Wishes

Send happy birthday messages to your patients and tell them how you remembered them on their big day.

### Two-Way Texting

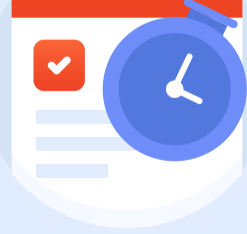

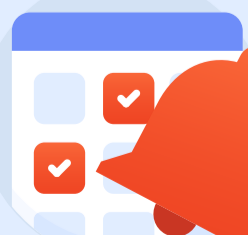

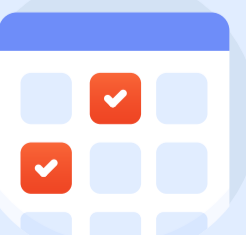

Send and receive short messages via two-way texting. Quickly answer questions concerning various phases of a patient care journey with a simple text exchange.

### Google review

Request reviews from your patients in real-time and invite them to write reviews directly on Google.
